

Component Heat Shield

## Starter Heat Shield

### Reliable Starts, Even When the Heat's On.

Excessive engine heat can cause starter failure and frustrating hot-start issues. Our Starter Heat Shields protect both the motor and solenoid, improving reliability and reducing downtime. Available in Lava® or Stealth® finishes, they install easily—often without removing the starter—and resist water, chemicals, and road grime for long-lasting durability. Made in the USA for builds that demand performance and protection.

Lava®	Description	Stealth®	Description
501070	Lava - 7-1/4 in x 21-3/4 in (pre 1990's starters)	501570	Lava - 7-1/4 in x 21-3/4 in (pre 1990's starters)
501071	Lava - 3-1/2 in x 18 in, High torque starters	501571	Lava - 3-1/2 in x 18 in, High torque starters

### Key Features

- Made from acid- and chemical-resistant volcanic rock fiber
- Prevents starter heat soak and hard-start issues
- Quick, custom-fit installation—no starter removal in most cases
- Outlasts traditional heat wraps and sleeves
- Proudly made in the USA with premium thermal materials
